## DETAILED ACTION

### *Election/Restriction*

1. Applicant's election of Group I, claims 1-26 in Paper No. 3 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Williams et al (US. 5,665,996).

Williams (Figs. 9A-9B) discloses a semiconductor integrated circuit comprising: contact pads 91 located over active components; and the position of the pads selected to provide control and distribution of power to the active components below the pads and to minimize the distance for power delivery between a selected pad 91 and one or more corresponding active components (column 3, lines 26-30). Williams further discloses that a wire is bonded to the bonding pad 91 at a desired location for reducing the resistance of the active components (column 3, lines 26-30).

Art Unit: 2814

Therefore, the maximizes dissipation of thermal energy would be inherently released by the active components.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sato (US. 5, 739,587).

Sato (Figs. 13-14) discloses a semiconductor integrated circuit comprising: a laterally organized power transistor; an array of power supply contact pads 100 distributed over the power transistor; means for providing a distributed, predominantly vertical current flow from the contact pads 100 to the transistor; and means for connecting a voltage to each of the contact pads.

Sato does not disclose a power source applied to each of the contact pads. However, it would have been obvious to apply a power source to each of the contact pads 100 of Sato in order to supply a voltage source to the power transistor.

***Allowable Subject Matter***

6. Claims 6-26 are allowed.
